A Three claims and the evidence that separates them

1 Queues differ
different cases reviewed

→

2 Added information
beyond S and consensus

→

3 Extra target hits
at the declared budget

Exact counterexample	Construction E	Matched G2 − G1
1 without 2 · §4.1	2 without 3 at 20% · §6.3	measures 3 · §6.4–6.6

B Mortgage protocol, per institution

Candidate construction

2018 training: 30,000
2018 validation: 10,000

Reference score S, threshold τ
26-model candidate grid
Global AUC gate → set R
Consensus C, range D over R

→

Target-aligned audit development

2018 former test: 10,000
C_{audit}, five folds

G0 logit S
G1 G0 + consensus C
G2 G1 + range D

Five-fold OOF policy choice
Full-data refit

→

Fixed-policy evaluation

2021–2023 former test
Six institution–vintage cohorts

Models and policy index frozen
Targets: all errors, FN
Budget: 10% of each cohort
Contrasts: G2 − G1, full − base

Read with: score geometry (Fig. 3) · remaining hit capacity (Eq. 6) · candidate reconstructions (Fig. 7)
